

4th Annual 24-Hour Genealogy Webinar Marathon April 2023

There is more at MyHeritage than family trees and photos

Fran Kitto, @travelgenee

When visiting MyHeritage users often focus on growing their family tree or experimenting in the photos section. However, there are lots more features and functionality to use at MyHeritage. Consequently, talk is a speedy trip around the Home, Discoveries, DNA, and Research sections of the MyHeritage website. Even though it leaves out two other main sections, Family Trees and photos it is still a fast journey.

Viewing of the webinar is worthwhile, if you have not done so already, as the screen images better demonstrate benefits of these sections in progressing your family history.

While demonstrating the four sections noted above, 10 other points transpired:

1. There is a lot more than just trees and photos on the MyHeritage website.
2. To make use of the site you need to invest time in educating yourself about its functionality and features on the website.
3. This learning needs to sometimes be done in a focused way and separately from doing family research.
4. MyHeritage has lots of support, including detailed step-by-step processes to use many of the features.
5. For further queries there is the Help Center and Knowledge Base.
6. The HOME section focuses on helping you engage with family to progress your research.
7. You need to understand how DISCOVERIES is segmented so when you dive in it is not a belly flop. They are more than just hints.
8. To manage your DNA and benefit from the investment you have to invest time educating yourself. Plus take it slowly.
9. To succeed, plan to focus your research.
10. The functionality is there. Now you need take control of your choices.
