#### Audience Question:

**Q:** I transferred DNA from 23andMe when I had a MyHeritage subscription. When the subscription runs out, what happens next? Do I have access to the tools etc?

**A:** I believe you retain access. They just ran a special during RootsTech where they offered free transfers and it included lifetime access.

#### Audience Question:

**Q:** Overall, my updated ethnicity results much better reflect my heritage than before. But, since almost all of my ancestors (over at least 2 or 300 years) were from Great Britain and Ireland, how do I get 4% Dutch?

**A:** Well, like the US, the UK is diverse - their migrations were just older than the US (not including their 20th century and later in migrations). Like the Romans, Celts, Normans, Anglo-Saxons, Norse and the Dutch too. Think William of Orange. The UK is not a homogenous group.
